

Reliable. Efficient. Affordable. Beyond GPS Tracking.

Free secured software • Free technical service and support • Free training
Optional sensors • No server requirement, only a PC with high speed internet

DELIVERY AND DISTRIBUTION

It is essential for delivery and distribution companies to provide services in a timely and cost-efficient manner. Businesses are running on tight margins in today's competitive environment. Having accurate, detailed information on delivery and transportation can reduce cost and improve efficiencies.

IndusTrack can help reduce delivery cost by optimizing routes, providing real time location, and reporting the condition of delivery items. Our specialized temperature sensors can monitor cargo temperature at the time of delivery.

FIELD SERVICES

In the field service industry, instant communication, real time navigation, and efficient dispatching is vital to a worker's productivity. Imagine if you could quickly re-route the vehicle based on ever changing customer demands. Instead of traveling to the office, new directions and instructions are instantly sent to the driver.

IndusTrack's real time GPS tracking system can typically add one additional job per day, significantly increasing profitability.

FEATURES

Live Tracking

Locate and monitor your vehicles 24/7 using our secured software.

Communicate Instantly

Exchange text messages with mobile workers to ensure precise communications and improved productivity.

Snail Trail

Run a breadcrumb trail to show the exact routing of the vehicle.

Monitor Vehicle Temperature

Monitor the inside and outside temperature throughout the day. Know the exact temperature at time of delivery.

Monitor On-board Equipment

Monitor on/off conditions for equipment inside the vehicles such as fuel and air compressors.

Automate and Streamline Work Order Processes

Receive alerts based on predefined conditions; stop, excess speeding, and off-route activity.

Receive an e-mail, text message, or watch live alerts using our software.

Custom Sensors (added feature)

We can design custom sensors to fit your needs.

BENEFITS

Fuel Saving

Companies save an average of 10% on fuel consumption by adding GPS tracking systems to monitor mileage, idle time, and excessive speeding.

Increase Operational Efficiency

On average, each vehicle could complete at least one delivery or job per day by using an IndusTrack GPS system.

Reduce Overtime

Properly optimized routing and driver monitoring can reduce overtime up to 50%.

Improve Safety

Keep track of vehicle speeds and monitor driver behavior.

Lower Insurance Rates

Many insurance companies offer discounted premiums for vehicles that have a real time GPS system.

Documented Productivity

Resolve customer disputes with documented activity.

Management Reports

Manage employee schedules, travel time, mileage, workforce scheduling, jobs, etc.

Reduce Theft

Keep a digital eye on your vehicle, set up a geo fence around a state, city, or a certain geographic area.

Receive instant notification when your vehicle travels outside the Geo Fence.
